Very impressive. Enormous, powerful machines, operating with great efficiency. The pleasure of the machines in action was underlined by the fact that the "guts" of the machines are visible -- they are not covered up with decorative and largely useless cover and such, as are most of the machines that exist in the daily world. These machines were/are gigantic "no-nonsense" machines and I did enjoy seeing them. No six "Thomas Usher, Sr." cards that are shown in this account were given to me on 9-23-83 by Job. He gave me one about a week ago and it was dirty and not highly legible. I pasted it down in this account & asked John for a better copy. He gave me 6 on 9/23/83 and I replaced the soiled one with a new one and pasted the other five cards on this page. Thomas Usher, Sr. is

The afternoon was very pleasant. Phil and Rosemary are in Bermuda and yet we (Dotty, Texon, Debby Verna, Shelly Marusso, Kathy Smith, Larry Gabriel and I) have managed to produce a paper. We managed to get our work done and were not troubled by P&R and their "power trips" and pretty nonsense. They should be the business manager of the paper and not the editor. As business managers they would be excellent. As editor they are less than excellent. At about 6 PM I was typing into the computer the "Belle" article when Job appeared out of the blue. I first thought that he was on his way to work at the Library, but was mistaken. He was just dropping by to see what I was up to and after I finished the "Belle" article, he suggested that we go over to Hendrick's and see his father. I had never been in the plant part of Hendrick's and was pleased to have the opportunity. John was on his motorcycle and so I walked down here (at 13 P.M.) and got my own helmet and we were at Hendrick's in a minute or two. Jack Buberniak was not at his machine when we arrived and so we (John and I) walked around and looked at the machines.

no-on 9-22-83
